Mind, Brain and the World, with Dr. Peter Fenwick, 8th - 10th October, Dartington Hall

What is our current understanding of the relationship between mind, brain and the world? In altered states of consciousness it becomes apparent, as current science suggests, that the world is highly interconnected and that we are linked closely one with another. Evidence from parapsychology and from prayer research shows that this linking has practical consequences. Phenomena occurring on the borders of dying which suggest that personal consciousness may be part of a greater whole will be examined. Participants are requested to bring experiences, either personal or from people they know and trust, which might illustrate any of these points. Course Fees Residential £137 Non-residential £117
